

PRODUCT LIFECYCLE

“The product lifecycle is the collective stages that a product goes through from its conception and design through to its ultimate disposal.”

Disposal Guidance

The best way to ensure your Product has a long life is to follow the Care and Maintenance guides set by the Manufacture after purchase. This document can be found at www.bagnodesignlondon.com

The lifecycle of the product is not in correlation to the product Guarantee; the standards the products are manufactured or certified to (e.g. CE & WRAS) can exceed past the Guarantee duration.

After the lifecycle of the product is deemed complete by the end-user please follow the below to dispose of the items correctly...

White Bathroom Goods:

When Basins, Toilets and Bidets chip or crack they would be un-repairable. Please remove any plastic/metallic from the items so these can be disposed of easily at a registered Local Authority waste recycling centre.

Mixers (Taps):

If the mixers are no longer accepted due to mechanical use or aesthetic style, these can be disposed of at a registered Local Authority waste recycling centre where the individual components can be sorted.

Electricals:

It's easy to check if an electrical product, is recyclable. Simply ask the following questions and if the answer is yes (to any of these) - it is recyclable:

Does it have a plug?

Does it use batteries?

Does it need charging?

Does it have a picture of a crossed out wheelie bin on it?

If the Product does not appear on the above list, contact your Local Authority for safe Disposal of the product.
